

TECHNOLOGY UPGRADES

Future Life is constantly adding powerful features to Face2Face. Here are a few worth noting:

- As of today F2F's live mode displays not only a real-time graphic representation of subjects' FMEEs as an interview is proceeding, but, additionally users can chose to save data and/or video from the session.
- The most recent update expanding the technologies capabilities includes detailed time stamps which allow users to match emotional time stamps with specific images from the subject's assessment. This feature adds the power of "pictures worth 1,000 words" to the interpretation of FMEE data. This feature is slated to be automated in a future update.
- Some of the additional F2F features scheduled for automation in 2020 are: FMEE Footprint and FMEE Flow Graphs; a FMEE correlation matrix with significant interactions between emotions highlighted; flagging of critical FMEE clusters such as deception and emotional flooding.
